Комплектовочная ведомость / Packing list

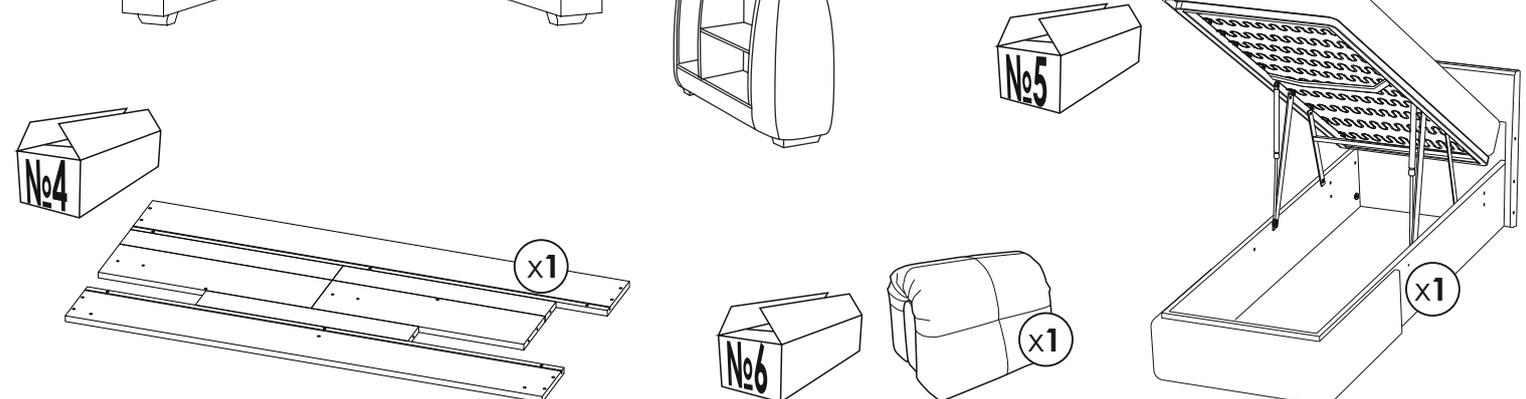

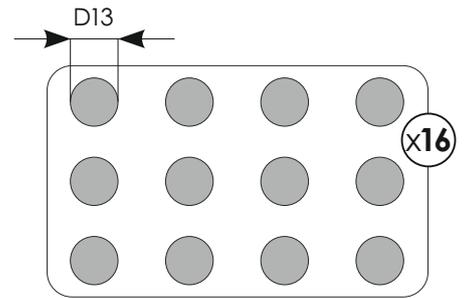

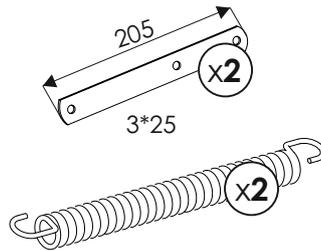

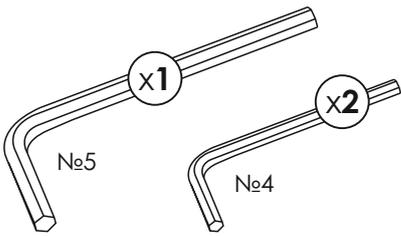

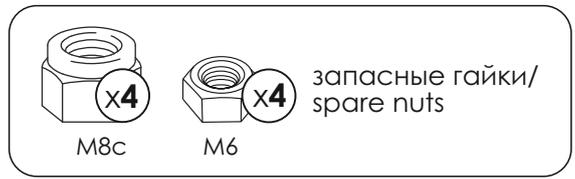

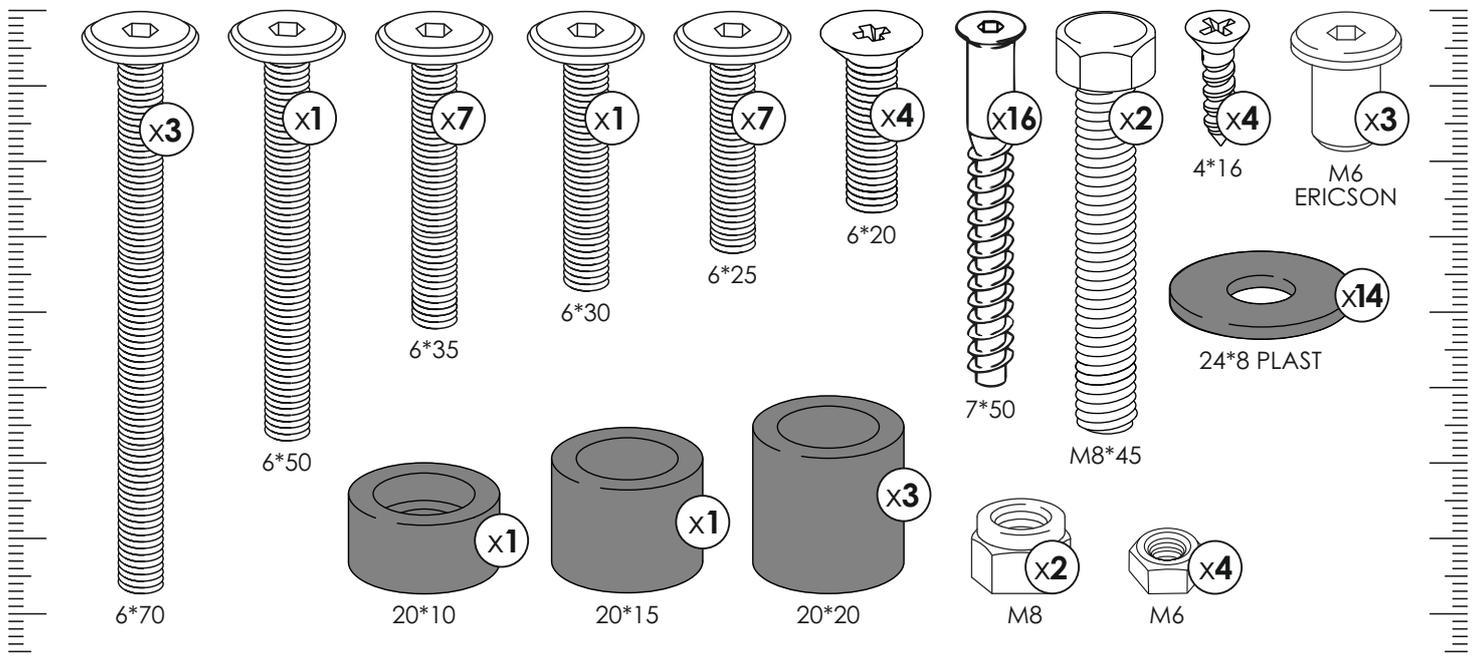

*2шт для спального места 180*200 / *2pcs for sleeping area 180*200

*варианты подлокотников / armrests options:

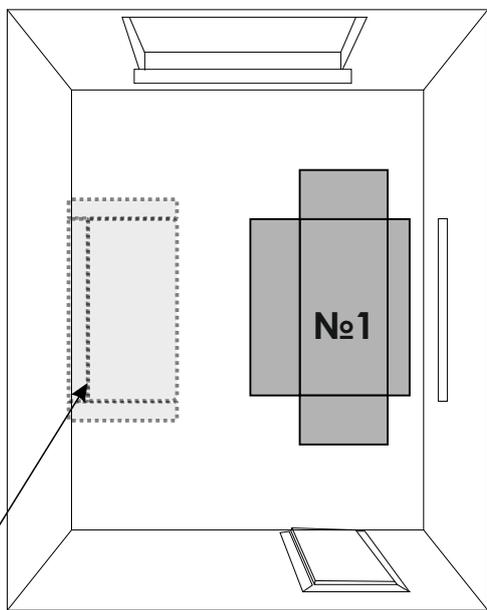

пл25 полки/ ar25 shelves

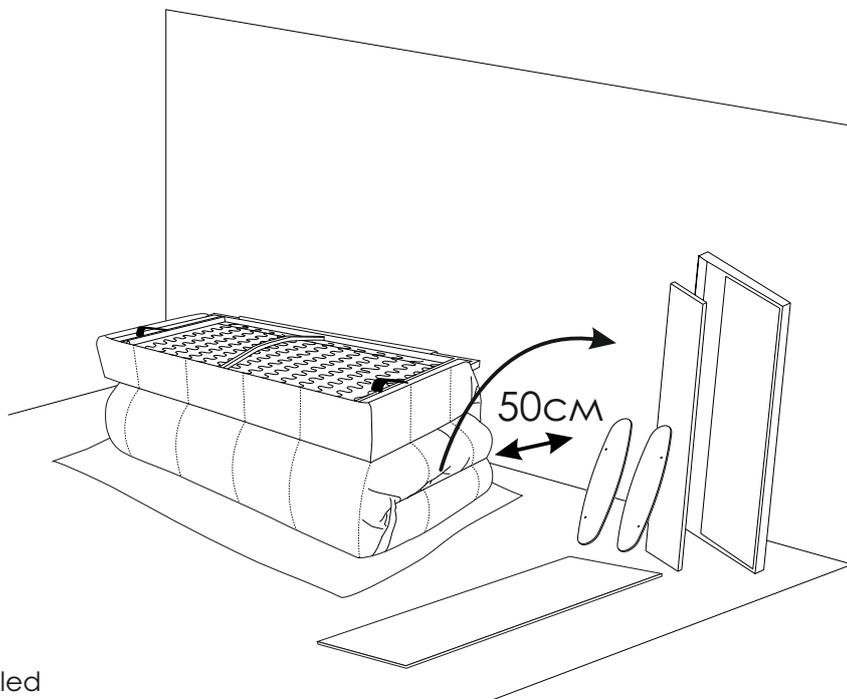

1

Расположение дивана после сборки /
Location of the sofa after having been assembled

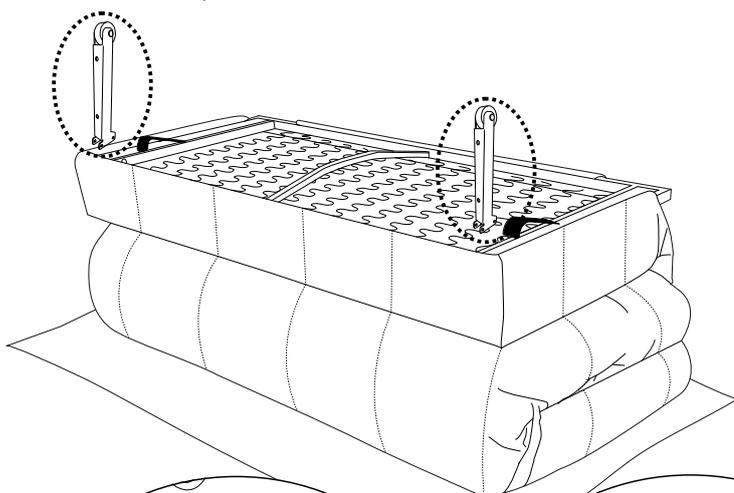

2

Весь механизм протягивать **ОДНОКРАТНО** до начала деформации металла (усилие 8Нм). Слабо затянутые гайки ведут к возникновению скрипа.

Раскручивать и закручивать гайки не рекомендуется из-за износа нейлонового вкладыша. В случае необходимости использовать запасные новые гайки из комплекта фурнитуры.

All the mechanism is to be tightened only **ONCE** until the metal starts to become deformed (force 8 Nm). Loosen nuts cause creak appearance. It is not recommended to unscrew and screw the nuts because of the nylon insert wear-out.

If necessary, use spare new nuts from the set of fittings.

Общие рекомендации / General recommendations

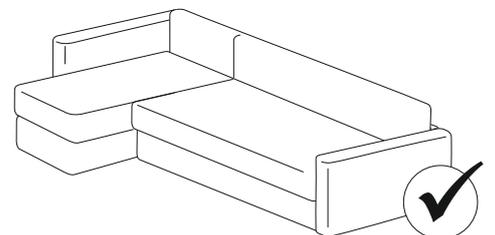

Для ковров и обивки
Сделать тест
на образце ткани! /

For carpets and upholstery
Test it with the fabric sample

Складки расправить
от центра к краям /

Tuck to be spreaded from the
center to the edges

Профилактика скрипа / Creaking prevention

- 1) Проверить скрип опор об пол (все ли опоры стоят на полу), подложив под них лист бумаги. Если скрип пройдет, то наклеить фетр на эти опоры.
- 2) Убрать ковёр. Висящие опоры выровнять, ослабив крепление к подлокотникам, можно добавить фетр на опоры
- 3) Поднять сиденье, открутить бельевого ящик.
- 4) Поднять диван.
- 5) Протянуть все места на механизме, кроме гаек под пластиковыми стопорами. Гайки протягивать до упора, до лёгкой деформации металла трубы. Подвижное соединение до упора и назад на 1/4 оборота. Протянуть царгу.
- 6) Смазать концы пружин.
- 7) Проверить наличие фетра на пластиковом амортизаторе. Если нет или тонкий - приклеить новый фетр 20*20*3мм.
- 8) Опустить диван, проверить отсутствие скрипа, поднять сиденье, прикрутить бельевого ящик.
- 9) Проводить смазку и протяжку рекомендуется не реже 1 раза в 6 месяцев.
